

## Soundac® PVP

### Sandwich anti-drumming metal sheet

Soundac® PVP is a metal sheet with sandwich anti-drumming designed to reduce vibrations and noise transmission. Soundac® PVP consists of two metal sheets with a thin viscoelastic inner layer.

Soundac® PVP provides a significant improvement in comparison to a normal metal sheet. The high loss factors make it very well suited for e.g. ceilings, walls and even floor systems.

#### Description

The system is based on the principle of sandwich anti-drumming with a constrained layer. When the Soundac® PVP sheet starts to vibrate the vibrations are converted to a small amount of heat.

#### Properties

- Anti-drumming
- Steel or aluminium
- Can be supplied in RAL coating
- Wall or floor panels
- Wide range
